The Complete Blazor UI Component Library

A comprehensive, native UI component library for Blazor development.

Key benefits

- Lightweight and user-friendly components
- File-format libraries
- Built for performance
- Responsive and touch-friendly UI
- Stunning built-in themes
- Globalization simplified
- Code on GitHub

Popular components

DataGrid

A high-performance, feature-rich data grid control that supports sorting, grouping, filtering, editing, on-demand paging, virtual scrolling, exporting to Excel, and more.

Diagram

A powerful, feature-rich diagram control for creating, visualizing, and editing flowcharts, organizational charts, mind maps, and BPMN charts through code or a GUI.

Charts

The Charts control offers 50+ chart types ranging from line to financial charts, with an emphasis on fast performance for visualizing 100,000 data points in less than a second.

Major components

Scheduler

The Scheduler is a fully featured calendar component that allows you to manage your time efficiently. It facilitates easy appointment scheduling and resource assignment through support for drag and drop, resizing actions, groups, and more.

TreeView

The TreeView allows you to represent hierarchical data in a tree-like structure. It provides great performance with advanced features like load on demand, checkbox selection, drag-and-drop support, and inline editing.

Pivot Table

The Pivot Table is a multidimensional data visualization component built for relational data sources. It can manage pivot reports at runtime using a field list and features aggregation, filtering, sorting, and more.

Rich Text Editor

The Rich Text Editor is a feature-rich WYSIWYG HTML and Markdown editor. It has a variety of tools to edit rich content and returns valid HTML or Markdown markup.

Full list of components
